### **Examiner's Amendment/Reasons for Allowance**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- Claim 10, line 1, changed "claim 10" to --claim 9--

The following is an examiner's statement of reasons for allowance:

- The primary reasons for allowance for claims 1-27 are the inclusion of a method of color-calibrating comprising the steps of establishing an absolute perceptual parameter of a defined maximum tone and storing a numerical representation of the established absolute parameter for later use in color correction calculations for the printer. It is these limitations, either alone or combined as claimed, that have not been taught, found, or suggested by prior art.
- The primary reasons for allowance for claims 28-38 are the inclusion of a method of providing absolute color standardization comprising the steps of storing for access by each printer a numerical representation of an absolute

perceptual parameter for at least one tone, and later retrieving and applying the stored representation to establish the printer dynamic range. It is these limitations, either alone or combined as claimed, that have not been taught, found, or suggested by prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Beauchamp et al. (5,835,108) teach a method for calibrating an inkjet printhead by printing separate test patterns then using a carriage mounted sensor to scan the patterns to determine the locations of the print drops.
- Fuse (5,539,434) teaches a printing test pattern to detect the amounts of shift to determine the maximum number of nozzles to be used.
